Director config (bacula-dir.conf)
Director
One director record for general setup.
Client
A pointer to the computer you want to backup.
Schedule
Definition of when this job will run and if it is a full or incremental backup.
Job
Definition of one FileSet from a single Client backed up according to a Schedule to a Pool of tapes/files on a Storage device.
Storage
A pointer to the backup device (tape drive or disk storage).
FileSet
Definitions of paths to the files you want to backup, with rules to exclude certain files.
Pool
Collection of tapes or disk files which make up the storage. You may have multiple pools in different rotations.
Catalogue
Details of the SQL database which stores the catalogue (index to contents of backup).
Messages
Setup of the notification emails.
Console config (bconsole.conf)
Director
Which directors this console can connect to. (Usually you have only one director.)
Simplified Bacula object definitions
File daemon config (bacula-fd.conf)
Client
One client record for general setup.
Director
Authentication details for the director allowed to control this daemon.
Messages
What messages are sent back to the director.
Storage daemon config (bacula-sd.conf)
Storage
One storage record for general setup.
Director
Authentication details for the director allowed to control this daemon.
Messages
What messages are sent back to the director.
Device
Characteristics of the storage device (tape driver or disk).
